

THE PRIMARY LOCKUP

ᵀᵛᵁ | PORUS.AI

The company name written twice: once in Ashokan Brahmi — **pō · ru · sa**, the script the name was first recorded in — and once in Latin, separated by a tick rather than a rule. Neither script is subordinate. The Brahmi is set in Noto Sans Brahmi; the letterforms are authentic, not drawn.

01 · CONSTRUCTION

Everything derives from S, the Brahmi type size.

Brahmi type size	S
Brahmi tracking	0.05 em
Latin type size	0.47 S
Latin tracking	0.22 em
Latin weight	500 · Plex Mono
Tick height	0.36 S
Tick weight	0.028 S
Gap, each side of tick	0.42 S
Alignment	Optical centres

02 · CLEAR SPACE

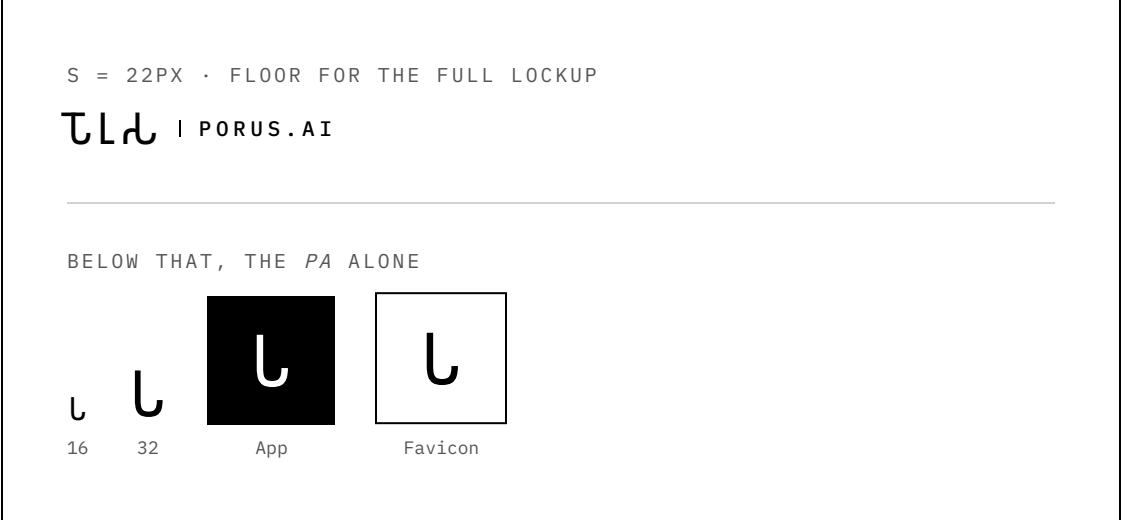

Half of S, on all four sides.

Measured from the outermost ink, including the Brahmi descender under *ru*. No type, rule, image edge or crop enters this band.

03 · MINIMUM SIZE

S = 22px, and no smaller.

04 · THE FOUR APPROVED VARIANTS

Nothing else is the logo.

A · PRIMARY, POSITIVE	B · PRIMARY, REVERSED
C · STACKED, FOR NARROW SPACES	D · ICON · THE PA

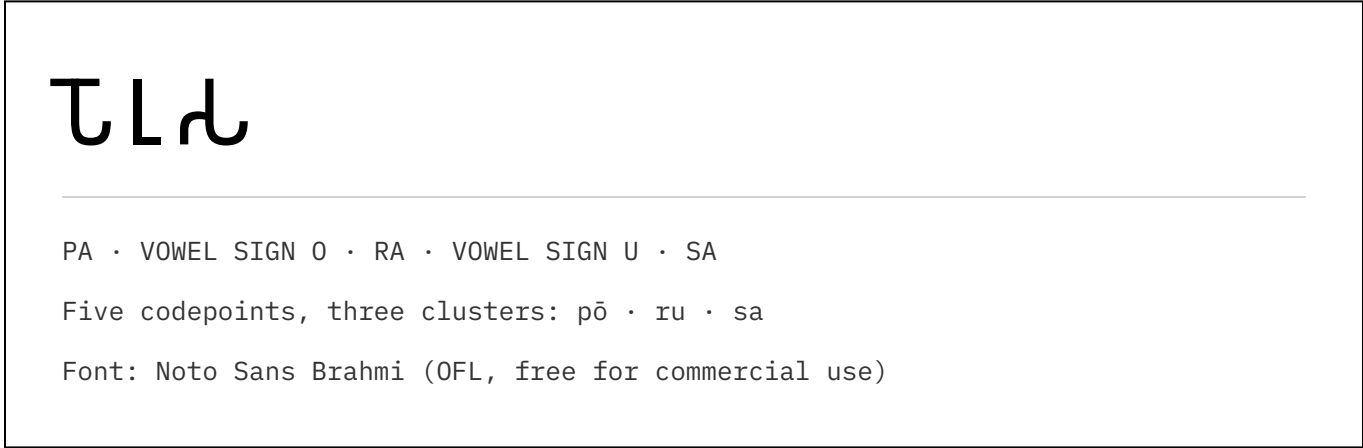

05 · MISUSE

Six things that break it.

Do not shrink the Latin. The two scripts are peers.	Do not extend the tick into a full rule. It is a pause, not a divider.	Do not reset the Latin. Plex Mono, 500, tracked 0.22em — always.
No gradients, tints or colour. Solid black or solid white.	Never skew, rotate, stretch or outline the lockup.	Never retype the Brahmi by hand. Copy the exact string below.

06 · THE STRING

Copy this, never retype it.

07 · TO MAKE PRODUCTION ARTWORK

One step, in any vector editor.

- Set the string above in Noto Sans Brahmi at the sizes in section 01.
- Set PORUS.AI in IBM Plex Mono 500, tracked 0.22em, uppercase.
- Draw the tick as a rectangle: 0.028S wide, 0.36S tall.
- Select all three and convert type to outlines. That is the final logo file — no live text.

The PNGs exported alongside this sheet are correct for slides, docs and web use today. Outlined vector is what you want for signage, embroidery and anything printed at scale.
